

PersevalPro Issuer

Fast track the launch of EMV cards and contactless devices.

Overview.

To launch innovative and interoperable products quickly and efficiently, issuers and personalization bureaus must confirm compliance with payment specifications and issuer rules.

Pre-certify your device with the highest quality control.

EMV® cards and mobile payment application testers can use **PersevalPro Issuer** to retrieve personalization data and tags instantly and detect parameters which are not in line with scheme specifications.

How it works.

- Test libraries perform test functions for a brand test plan.
- Quality Control (QC) module allows customizable quality assurance testing beyond brand test plans.
- Host simulation module enables cryptographic verification and issuer script or online payment simulation.

Fime can help you at any stage of your project lifecycle.

Personalization validation tool for EMV.

Key benefits

- Test with an officially qualified tool for pre-validation and lab certification to save time and money.
- Accelerate time-to-market for EMV products with automated testing PC.
- Test your card profile against any predefined profile and retrieve all EMV and brands tag values in seconds.
- Add and update test cases easily thanks to the flexible architecture.
- Suits EMV experts as well as novices with a user-friendly interface.
- Continuously updated test libraries ensure alignment with international and domestic brand updates.

Key features

- The tool is officially qualified against the latest test tool requirements from ATH, CUP, Discover, eftpos, GIE-CB, GIMAC, Interac, JCB, Mastercard, NETS, PayPak, RuPay, Troy and Visa.

Libraries.

Multibrand test libraries
