Enabling a safe and interoperable open API framework.

TrustAPI+

Speed up and simplify your API testing through automation

Overview.

Large organizations like banks, payment networks and industry alliances are looking to launch new digital services and encourage innovation by leveraging APIs. They must foster and manage interoperability in their ecosystems, while helping digital stakeholders achieve compliance with API requirements.

Want to streamline your API testing and certification? **TrustAPI+** simplifies and fast-tracks API testing by utilizing its integrated domain knowledge to produce repeatable, automated, and reliable results for thousands of test cases. This helps you scale up your new digital services at speed.

TrustAPI+ also utilizes machine readable and customizable test plans for both functional and security testing. This eliminates time consuming scripting activities while allowing the effortless integration of any changes to the testing scope.

Fime can help you at any stage of your project lifecycle.

(Define)   (Design)   (Deliver)   (Test)

Key benefits.

- Simple onboarding experience through a user-friendly web UI.
- Seamless certification flow for pre-compliance and compliance testing.
- Unlimited testing and debugging prior to compliance validation.
- Effortless and reliable testing thanks to fully automated and integrated test plans.
- Secure information management, certified by ISO 27001.
- Accelerated problem-solving with a detailed log view and remote expert support.
- Improved time-to-market by leveraging seamlessly integrated and machine readable test plans.

Key features.

- Completely web-based solution.
- Automated functional and security test campaigns for REST APIs, giving an automated pass/fail result.
- Enables continuous integration with your CI/CD.
- Benefit from clear and comprehensive reports ahead of final certification.
- Loads and manages simulated member data assets.
- Delivers simulated open banking client application use cases (e.g. PSD2 PISP & AISP).
- Creates and maintains specific business functional and security test campaigns with machine readable test plans and a built-in collection of test methods.

How it works.

As an ecosystem owner.

- Build your own machine readable test plan.
- Provide and manage access to the ecosystem for members.
- Monitor the evolution of the ecosystem.

As an ecosystem member.

- Access a cloud and subscription-based API test platform.
- Perform pre-compliance self-testing and debugging.
- Receive remote issue analysis support.
- Submit online pre-compliance and compliance logs, and test reports, to a remote API expertise center.
- Confirm reports and request authority approval.

Libraries.

- STET v1.4.
- The Berlin Group NextGenPSD2 XS2A 1.3.5.
- ReBIT v1.1.2 (Sahamati) FIU, FIP, AA
- NRCeS HL7/FHIR (Release 4). (ABDM) M1,M2, M3, M4

How can we help?

Explore our services.

Powered by Fime Test Factory.
TrustAPI+ is compatible with the following value-added modules:

- **MyTest Process** to digitalize certification projects management.
- **MyTest Studio** to customize machine readable test cases in a no code environment.

More services.

- **Machine readable test plan.**
  Our consulting services can help you build, migrate and optimize your test plan.

- **Quick onboarding.**
  Our managed services provide personalized user onboarding training.

- **Remote expertise.**
  On-demand expertise to support members and validate compliance reports.
