fime

Mobile payment application testing

Ensure your app is ready for payment and telecom ecosystem certifications.

Testing that gets your app to market faster.

Overview

Global+ enables application developers to deliver innovative and interoperable experiences to customers - quickly, easily and safely.

Fime used its extensive experience in the payments and telecoms industries, and in-depth knowledge of standardization bodies to develop Global+ and ensure the complete validation of your products whether it is physical (SE, eSE) or cloud-based (HCE).

The test platform provides efficiency for developers, enabling them to easily test in line with full test suites or only select the relevant test cases.

How it works

- Global+ works via a secure connection between the System Under Test (SUT) and the cloud-based test engine to run individual, subset or all test cases.
- Then understand test results in seconds or get a single view of ongoing testing projects.

Fime can help you at any stage of your project lifecycle.

Define   Design   Deliver   Test

Key benefits

- Test with an officially qualified tool for pre-validation and lab certification to save time and money.
- Save time and money with the test tool's automated testing function.
- Test anywhere using any PC.
- Enhance collaboration between teams located across multiple sites.
- Benefit from a tool that is constantly updated in line with the latest specifications.
- Control testing costs with Fime's annual subscription model, including all specifications updates.

Key features

- Access any System Under Test (SUT), anywhere.
- Test several products simultaneously.
- Run several test suites at the same time and execute tests in bulk or one by one.
- Share your test view with colleagues & Fime labs.
- Stop and resume test run anytime.
- Integrate with your CI/CD framework.
- Run any test suites using command line scripts.
