

Instant Payments

With the recent adoption worldwide and the resounding success of existing solutions, instant payments have emerged as a critical topic.

Banking institutions must be prepared for the implementation of instant payments. For instance, in Europe the Council of European Union has ordered a mandate by 2025 for full implementation.

A concrete use case is the EPI-initiated European Wero wallet, powered by instant payments, boasts a rapid rollout schedule for P2P transactions.

Existing global deployments of instant payments serve as a testimony to their transformative power, fundamentally altering payment habits.

Instant Payments

Case study

Our expertise.

Recognizing their potential, a leading French merchant has directly hired Consult Hyperion to conduct a strategic analysis on the challenges and opportunities presented by instant payments for their business, paving the way for a successful implementation and deployment strategy.

Achievement.

Consult Hyperion has conducted a thorough evaluation of leading instant payment solutions, identified the most suitable use cases for businesses, and shed light on the crucial technical elements associated with instant payments (Open Banking, Request-to-Pay).

Deliverables.

- Benchmark of the current and major instant payments solutions.
- Strategic implementation plan for the integration of an instant payments solution.
